Why InVhestia's Financial Modelling Training

- InVhestia is an East African project and corporate finance advisory firm that provides services to firms across all sectors seeking to establish a footprint in the region.
- We help firms in their decision-making be they **strategic, operational or financial** by quantifying such decisions and offering in depth analysis into the options available through **flexible, appropriate, structured and transparent (FAST)** financial models based on the international FAST Standard methodology.
- InVhestia is the first and only FAST Standard **certified provider** in Africa.
- InVhestia offers the following services:
 - Financial Modelling Solutions (Model build, audit, and training)
 - Corporate Finance Advisory
 - Project Finance Advisory

About FAST Standard

- The **FAST Standard** was created through a collaborative effort of experienced financial modelling professionals from across the globe.
- Changes to the standard are considered and made after consultations with a moderation board that is made up of several industry experts.

Flexible	A flexible model meets its objectives and can be maintained, re-purposed and updated as needed.
Appropriate	An appropriate model reflects key business decisions without unnecessary detail.
Structured	A structured model has been built consistently and ensures that form follows function.
Transparent	A transparent model is as simple as it can be and does not have unnecessary complexity to obfuscate its functionality and can be used by anyone with some modelling experience, not just its creator.

We run an organization that interacts very closely with its clients and so it's very important to us that we find the right people for the organization.

We get a lot of people who are truly qualified, on paper. At a minimum, a majority of applicants have the right experience.

That's why everything in the application process matters; we form an opinion of the job applicant during every single interaction.

We then only hire the best fit for close work with our clients.

Online training

Online training

Corporate Finance and Valuation Financial Modelling

This self-paced financial modelling course is aimed at equipping learners with skills to make forecasts and valuing companies based on historical information. Taught using the FAST Standard of financial modelling, this course will make sure that learners build a robust financial model with skills from the course being easily transferable to different modelling challenges.

Forecasts will cover revenue lines, costs (fixed and variable), fixed assets, financing, equity, working capital, and taxation leading to integration in three

core financial statements – Income Statement, Statement of Financial Position, and Statement of Cashflows. The financials are then used to create a valuation of the entity.

During the course, participants also gain an insight into how to tailor the outputs of the model to end users, interpret the results and run sensitivities, as well as perform some degree of testing to reduce the incidence of modelling errors. Discussions are also held on various aspects of valuations and these are incorporated in the financial model.

Online training

All prices exclusive of 16% VAT

Single license

1 person: KES 40, 000

Multiple licenses (per person)

1 – 4 persons: KES 40, 000

In-class training

In-class training

We offer customized training solutions for your team using adapted case studies to ensure that your team gets maximum learning from our trainings. With two trainers in each section, you are assured that no team member gets left behind.

We have identified three key areas where organizations such as yours find our training services to be very timely and effective.

Budgeting, Forecasting & Data Analysis

This course is suitable for accountants, finance managers, CFOs and peers.

We teach how to prepare forecasts, prepare budgets, set up dashboards, carry out variance analysis among other skills using the FAST Standard.

Corporate finance and Valuation
This course is suitable for analysts, investment managers and peers.

We teach how to forecast and value a company using the FAST methodology. We have case studies in banking, insurance, manufacturing and the hotel industry.

Project Finance

This course is suitable for project finance analysts, managers, project developers, government PPP managers and peers.

We teach how to model IRRs, NPVs, including complex financial structures, DRSA accounts etc. using the FAST Standard. We have case studies in real estate and manufacturing.
